New Street Lights in the WOODCROFT Neighbourhood

As part of the 2012 City of Edmonton Neighbourhood Renewal Program, along with the rehabilitation of Roads and Sidewalks, EPCOR Technologies will be replacing the existing street lighting with new poles, foundations, and lighting.

Existing street lighting will be maintained during all stages of construction.

Galvanized street light poles will be used as temporary street lighting until decorative streetlight poles arrive.

During construction there may be restricted parking on streets during construction hours to provide adequate working space for the construction crews.

For further information regarding the construction of street lighting please contact:

Jim Chimko, EPCOR, Operations Manager
